Reference: Metal-Fab Model SureSeal DV Direct Venting System

We are pleased to announce that Metal-Fab SureSeal DV hearth products venting systems have been independently tested by Intertek Testing Services and have been found to comply with the safety test standards for our direct vent Napoleon and Continental gas fireplaces.

When using Metal-Fab as an alternate vent system follow all the same guidelines, currently included in our installation instructions.

Vent adapters are available from Metal-Fab for our fireplaces that use 4 and 7 inch diameter as well as an adapter for our fireplaces that use 5 and 8 inch diameter venting. These part numbers are 4DNAS (S for stove) for the 4/7 stoves, 4DNA for the 4/7 recessed products and 5DNA for the 5/8 recessed products.

Both of these vent systems are now available from Metal-Fab.

Yours truly,

Cliff Lilley, P.Eng.  
Vice President of Research and Development
